TECHNOLOGY – SOCIAL INCUBATION HUB

FOR COMMUNITY
DEVELOPMENT

“Make rural communities to be
developed and sustainable”

VISION

Technology-Social Incubation Hub brings development and innovative solutions that shall bring enormous impact to the local issues across the Region thru education, partnerships, researches, and community engagement and participation.

MISSION

To help the communities in the Region to achieve sustainable community and to enhance the quality of life and future well-being of the Region's diverse communities.

SERVICES OFFERED AND ITS FUNCTIONS:

Community-driven Development

Community development approach that moves an emphasis from the activity of the University to local communities.

Personal Development

Helping the communities in obtaining, strengthening, and maintaining the ability to set and achieve their own development goals.

Community Based Participatory Research

Brings together the efforts of the community members and researchers in the research of the community life and problems.

Partnerships

This aspect is aimed at helping the communities to form an activity that enables the members achieve their community development goals.

The Technology – Social Incubation Hub spearheads the creation of programs and projects that will bring development to the communities through technologies. In addition, TSI is responsible for managing researches that help communities achieve a developed and sustainable environment.

PROJECT HIGHLIGHTS:

PROJECT ILAWI: ILLUMINATE LOCAL AREAS THROUGH WISE INNOVATION

Project Description

Stability, extended service life, ease of installation, safety, high performance, and energy saving are all advantages of solar street lighting. This type of lighting may be seen in a variety of places, including city streets, residential areas, factories, tourist sites, and parking lots.
